Manufacture of pressure parts - the answer to your capacity issues

Whether you need a replacement or a modification, our experienced installation specialists can replace your boiler parts in no time at all. Which makes us proud to be the answer to your capacity issues.

System uptime and reliable service are critical for our customers. The rapid availability of pressure parts can make all the difference when it comes to getting your production process up and running again and reducing downtimes.

Our engineering department has experience in the re-engineering of pressure parts for boilers. Our spacious and fully equipped production is set up for the rapid delivery of high quality components. Production is supported by a professional back office.

Stork Hengelo is qualified and complies with all regulations and conditions governing the development, manufacture and testing of boiler components and pressure vessels.

Customisation, quality and service-oriented approach

We deliver customisations that meet your requirements perfectly. We combine this with excellent quality, an honest price and a service-orientated approach.

You can contact our production department at Stork in Hengelo for the production and assembly of parts used in the areas of design, equipment, burners, boiler construction and service.

Production takes place in a spacious, well equipped production environment with hoisting devices capable of lifting up to 160,000 kg. Amongst other things, we are able to manufacture the following:

- Assembly
- Pipe processing
- Sheet metal working
- Membrane walls
- Bending of membrane walls and pipes
- CNC-centre
- Headers
- ECO’s
- Superheaters
