STORK IS THE EXPERT PROVIDER OF INTEGRATED OPERATIONS, MAINTENANCE AND MODIFICATIONS SUPPORT SERVICES TO THE GLOBAL OIL & GAS ENERGY INDUSTRIES.
INTEGRATED INTEGRITY SUPPORT SERVICES

Stork is a leading provider of operations, maintenance and modifications (OMM) support services to the Global oil and gas industry. Our integrated approach allows us to assess, inspect and repair an asset to ensure its integrity, reduce unscheduled downtime and improve operational efficiency, without compromising safety or quality.

Working in partnership with Operators and their service providers, we use our extensive knowledge and expertise to plan and execute a wide range of OMM activity using best practice developed from many years experience in the onshore and offshore sectors.

Our turnkey service offering is delivered via a dedicated client focal point to reduce the number of interfaces for our customers, and we deploy multi-skilled project teams that are competent in a variety of core crew activities to reduce pressures on manning levels.

Our extensive suite of assured equipment, combined with our skilled and experienced people, enables us to deploy competent crews and quality equipment at short notice to meet all your OMM requirements.
WHAT WE DO

We provide a wide range of integrated support services to help you safely and cost-effectively deliver operations, maintenance and modifications to assure asset integrity.

- Fabric Maintenance
- Scaffolding
- Special Access Systems
- Specialist Coatings
- Rigging & Lifting
- Integrity Engineering & Management
- Inspection & NDT
- Hydro Testing
- Cathodic Protection
- Monitoring Solutions
- Specialist Cleaning
- Sand Management
- Asbestos Survey & Removal
- Vessel Management
- HVACR
- Electrical
- Mechanical
- Onsite Machining & Bolting
- Heat Treatment
- Training
- Manpower
HOW WE ADD VALUE:

It is our goal to add value wherever we operate. We help our clients reduce risk, assure safety and improve environmental performance by adding value in the following ways:

• By providing a single client focal point to coordinate integrated services, we increase efficiencies by reducing the number of interfaces involved, ensuring the most effective service delivery.

• Safety is our core value and Stork deliver safe and competent crews whilst adding value by delivering safety improvements across our clients’ operations.

• Our multi-disciplinary teams deliver efficiency – for example, our rope access technicians are also competent in complementary trades such as NDT, inspection, specialist cleaning, welding, fabrication, mechanical, painting, blasting and insulating. This reduces the number of personnel on board and associated mobilisation costs/bed space requirements.

• Our employees are competent in a variety of multi-skilled core crew activities, which delivers cost-effective solutions through minimum manning levels. For example, our offshore access supervisors will often cover the role of deck foreman and HLO, and our scaffold crews are deck and helideck competent.

• Our range of equipment, combined with our extensive manpower database, enables us to deploy competent crews and quality equipment at short notice. We have the capacity to provide large numbers of personnel on a long or short term basis to meet the fluctuating needs of asset operations.

COMMITTED TO TECHNICAL INNOVATION:

We are committed to developing and introducing innovative technologies and solutions to help deliver significant safety and efficiency benefits on all OMM operations.

These include:

• Hot Bolt Clamping
• Caisson & Riser Inspection Technology
• Cathodic Protection Systems
• Hydroblasting
• Advanced Online Desanding
• Composite Repair Solutions
• Extended Reach Breathing Apparatus System

A NEW WAY OF DELIVERING ASSET INTEGRITY

Traditionally, asset integrity has been delivered to Operators through several contractors who are each involved in:

- Maintenance strategy development
- Inspection strategy development
- Risk-based inspection programmes
- Inspection data analysis and reporting
- Planning and development of remedial workscopes
- Execution of repair and maintenance activities

**ASSESS, INSPECT & REPAIR (AIR)**

Stork is bringing a strong focus on improving maintenance programmes through rigorous costing and planning as well as adopting a full Assess, Inspect & Repair process. Stork’s integrity philosophy AIR, aims to deliver effective integrated contracts combining:

**Assess:** Integrity Management

**Inspect:** NDT & Inspection Services

**Repair:** Fabric Maintenance Services

At Stork we believe that by adopting a fully integrated integrity led approach to maintenance and modification, we can ensure the right workscopes are identified and delivered at the right time, using a right-sized approach. A co-ordinated integrated approach ensures integrity, inspection, operations and maintenance teams are working together to provide safe, efficient value added services. A continual review and improve process allows the identification and use of best practice inspection, maintenance and repair options, ensuring a cost effective solution for our clients.

Strategic planning is at the heart of this offering and by providing a service that includes assessment, inspection and repair, Stork work with clients’ asset teams to plan and deliver the highest possible service with the minimum disruption to production while maximising bed space availability. Effective planning and prioritisation are vital to the long-term focus of increasing productivity, reducing unplanned shutdowns and clearing anomaly backlogs.

By offering this integrated solution combined with a single interface that manages all our client requirements, Stork take ownership and accountability for your asset integrity and work in partnership with you to ensure an incident free asset with maximised production efficiency.
Stork work proactively with clients in a collaborative way to ensure we are in full alignment with their strategic and operational challenges. In order to maximise cost efficiency, we believe that a robust methodology for planning and prioritising workscopes should be developed in relation to the stage of an asset’s life.

We realise that operating assets and late life assets have very different requirements and, by considering the unique priorities and challenges of each asset, we allow for bespoke operating models to be developed. With early involvement, we tailor solutions designed specifically with the asset in mind to truly maximise production efficiency, minimise running costs and drive cost control and certainty.

Late life assets concentrate on guaranteeing maximum production and maintaining conditions as cost effectively as possible leading to the decommissioning phase and safe removal and disposal. We understand that maintenance is cost driven for late life management and a high level of responsiveness and flexibility is required to help assets reach their planned end of field life. Stork provides reduced costs by applying an integrated lifecycle approach, standardising teams, multi-skillling, eliminating waste and only delivering critical workscopes.
REACH Beyond Zero is our HSEQ vision, to engage all Stork employees to challenge themselves, to think and do more to improve our HSEQ culture and performance. As an organisation we REACH Beyond Zero by functioning as one team with shared values, driving action to transform our HSEQ culture and performance.

Safety is our core value and we are committed to translating our HSEQ ethos into sustainable and effective actions. REACH Beyond Zero communicates on Environmental and Quality issues in addition to Health and Safety as a fully encompassing employee-led initiative.

Our three year REACH Beyond Zero Road Map defines a measurable programme of activities to provide direction and to actively engage all of our personnel at every level and location.

Through REACH Beyond Zero, we deliver for our clients by:
- Engaging with and positively impacting their HSEQ culture
- Improving HSEQ performance on their assets
- Providing transparent HSEQ reporting
- Enhancing communication through shared information
- Leading topical HSEQ campaigns, discussions transferring knowledge and best practice

REACH Beyond Zero is built on five core values, which we seek to demonstrate at every level of our organisation.

The values are:
- **Visibility** - acting as active champions of the REACH Beyond Zero values
- **Authenticity** - demonstrating personal commitment through action
- **Leadership** - taking personal ownership and responsibility for HSEQ in the workplace
- **Understanding** - understanding our HSEQ challenges and contributing to improvements
- **Engagement** - feeling empowered to intervene when a situation appears unsafe
