## Stork Technical Services highlights integrated integrity offering at AOG

Stork Technical Services, the leading global provider of knowledge-based asset integrity services for the Oil & Gas, Chemical and Power sectors, will showcase its integrated integrity service offering and industry leading technology at this year's Australasian Oil and Gas (AOG) Exhibition and Conference in Perth, Australia.

Tony McAnulty, Vice President - Asia & Pacific for Stork Technical Services, said: "Australasia is a major growth area for Stork. We are committed to the ongoing development and innovation of our technology portfolio and integrated service offering. We work with many of the region's leading organizations to deliver asset integrity solutions and I am confident that 2013 will be a successful year for us."

Stork has operated in Australia for more than 30 years and has established operations across the country, from Perth to Sydney and Brisbane, in addition to other Asia Pacific offices in Kuala Lumpur and New Zealand. Key customers are major construction and oil and gas organisations including: CBI, Refining New Zealand, Caltex, Santos, McConnel Dowell and PTTEP.

Stork's integrated offering comprises a range of specialist integrity and heat treatment services including cathodic protection, corrosion monitoring, inspection, advanced inspection and non-destructive testing. Stork has identified the thriving LNG market in Australia as a major growth area, with particular focus on greenfield construction and post construction maintenance services. The company's integrated service offering means it has recently been awarded major contracts on some of Australia's largest LNG projects

Mr McAnulty continued: "Stork is a world class company and has an excellent reputation across Australasia for delivering a safe, quality and efficient service. We work with our customers to help extend the lifespan of their assets and our display at this year's AOG demonstrates some of the solutions we provide."
