From our new state-of-the-art workshop in Dallas-Fort Worth, Stork offers a one-stop shop for fabrication, overhaul, and maintenance of your critical equipment. In addition to our mechanical and fabrication services, we also offer a complete package of specialized services for pumps, gearboxes, compressors, valves, heat treatment, calibration and inspection, reverse engineering, and remanufacturing of parts for obsolete equipment.

**WHY STORK?**
- High safety standards from our “Safer Together” HSE platform
- Shorter lead times through our one-stop-shop philosophy
- Modular, innovative and OEM-independent services
- More than 100 knowledgeable and specialized employees at your service; including 24/7 emergency services
- Providing quality assurance, test facilities, and online reporting
- Always focused on preventing service interruption
ROTATING EQUIPMENT
• Complete service offering for all types and manufacturers of rotating equipment including pumps, gearboxes, and compressors
• From disassembly, overhaul and repair to re-assembly, commissioning, and replacement
• Re-manufacturing of rotating equipment parts through our reverse engineering offering
• Services provided both on-site and in-shop
• Wide-range of diagnostics and condition monitoring solutions
• Integrated services fully tailored to your needs

FABRICATION SERVICES
• Fabrication of process skids, furnaces, piping systems, pressure vessels and structural components
• Manufacturing of boilers, burners, deaerators and SCR/N(S)CR
• Full range of welding services including metal inert gas (MIG), metal active gas (MAG) and tungsten inertia gas (TIG)
• Detailed engineering capabilities including civil, electrical and mechanical
• Additional services: hydro testing, coating/lining, non-destructive examination (NDE), pre & post-weld heat treatment (PWHT)

HEAT TREATMENT SERVICES
• Turnkey service for a full range of engineered heat treatment solutions
• Access to in-house experts and experienced heat treatment engineers and technicians
• Integrated services from engineering to practical implementation
• Global resources ensure rapid response to challenges with fast and effective services
• Offshore and on-shore; on-site or in our ovens
• Heat treatment equipment is manufactured in-house under the Stork Cooperheat brand

REVERSE ENGINEERING
• 3D scanning and digitization services for your components
• Verification of component tolerances and complex geometry checks
• Creation of 3D Models for your components
• Re-manufacturing of obsolete parts to your exact specifications with OEM quality
• Expedited turnaround
• Measure and scan at your facility or at ours

VALVE SERVICES
• Complete service offering for valves including disassembly, inspection, repair, re-assembly, commissioning, and replacement
• Diagnostics for gate, control, and safety valves
• Both on your location and in our workshops
• Integrated services fully tailored to your needs
• Expedited turnaround
• Access to OEM spare parts and technical information

CALIBRATION & INSPECTION
• Inspect, measure, and calibrate your instrumentation and measuring equipment
• Develop and install complete calibration data management systems
• Establishment of procedures and protocols
• Development and execution of maintenance plans including the delivery of analytical reports
• We assess your measurement and control systems on-site or in-shop
