Let’s face it, Mother Nature plays by her own rules and the only way we stand a chance against hurricanes is through preparation. Whether working offshore or at home, always be prepared and follow these steps:

1. **Monitor** weather threats
2. **Assemble** an emergency kit
3. **Stay Informed** Evacuate if advised
4. **Avoid** Flooded areas

A Fluor Company
BEFORE - WHAT CAN YOU DO?

- Bring in outdoor furniture
- Board windows & doors with plywood
- Plan & practice evacuation plan
- Set fridge to coldest setting
- Turn off propane tanks & unplug small appliances
- Fill up gas tanks – in case you need to evacuate
- Identity hurricane evacuation route
- Evacuate if advised by authorities
DURING - WHAT CAN YOU DO?

- Fill bathtubs and other large containers with water
- Stay inside and away from windows and doors – closet, hallway or bathroom
- Stay close to the tv or radio for emergency updates
- Turn off utilities if advised
- Do not use candles – only use flashlights
- If flooding in home occurs, seek higher ground
Stay informed about weather updates, particularly flooding

Keep an eye out for downed electrical lines and report them right away

Avoid flooded areas – turn around, don’t drown

Do not run generators inside home or enclosed space to avoid carbon monoxide

Contact FEMA or American Red Cross if you become separated from your family

Contact direct supervisor for updates on office closure – do not drive to work if flooding persists
